Tunis

PROFILE

BI Engineer & Data Analyst (Computer Science engineering degree, specialized in Business Intelligence) with two years of consulting experience in a financial-services environment. Hands-on with SQL, data modeling, data warehousing, ETL pipelines (Talend, SQL Server) and Power BI reporting, from requirements gathering and functional specifications to testing and delivery. Used to translating business needs into reliable, maintainable data solutions and to working closely with business and technical teams. Academic knowledge of AWS and a keen interest in modern cloud data platforms. Open to relocating to Belgium.

WORK EXPERIENCE

Sept. 2024 - Currently
Tunis

Technical-Functional Consultant | BI & Data - Teamwill Consulting

Client: Crédit Agricole Leasing & Factoring — CBM Platform Project (financial services)

- Gather and analyze business needs directly with financial-services stakeholders on the CBM platform, a renovation of the middle-office critical applications (DE, E-lease, BT Référentiel Tiers, SAFIRE, SAS EKIP, Fiche Technique).
- Write User Stories and functional specifications that translate client requirements into deliverables the technical teams can build.
- Take part in User Acceptance Testing (UAT) sessions, reviewing deliverables with business users for clarity and accuracy before go-live.

Sept. 2025 - Aug. 2026
Tunis

BI & Data Analyst – Credit Risk - Teamwill Consulting

- Designed a Business Intelligence platform for credit risk analysis, integrating credit application and customer behavioral data.
- Designed the data warehouse and data models to centralize and structure data for analysis and decision-making.
- Developed ETL pipelines with Talend and SQL Server to integrate, transform and prepare data.
- Developed Power BI dashboards to monitor credit risk indicators and support data-driven decision-making.
- Developed machine-learning models for credit risk prediction and integrated SHAP/LIME for model explainability.

Jan. 2025 - June 2025
Tunis

BI / Data Analyst – Reducing CO2 Emissions in the Agro-Food Industry - ESPRIT

- Designed Power BI dashboards to make CO2 emissions data clear and actionable for non-technical stakeholders.
- Collected and processed the underlying emissions data using Python and Talend.
- Proposed eco-friendly strategies (waste reduction, energy efficiency) based on dashboard findings.
- Monitored the impact of implemented solutions through the same reporting.

June 2024 - Aug. 2024
Tunis

Power Platform Developer – Web Project Management App Development - Timsoft

- Designed a project management app with Power Apps.
- Integrated Power BI for tracking tasks, deadlines, and performance indicators.
- Automated workflows using Power Automate.

Feb. 2023 - June 2023
Tunis

Computer Vision Developer – Object Recognition Solution for Industrial Applications - All Circuit

- Developed a web application for detecting industrial objects.
- Integrated a Raspberry Pi camera for capturing and analyzing images.
- Implemented a recognition algorithm for testing LCD screens.
- Conducted real-world testing to validate system reliability.
